

LunarMiner – Whitepaper v1.0 Mine the Moon. Own the Future.

1. Overview

LunarMiner is a fully on-chain idle mining game. Players purchase solar panels and miners to generate real cryptocurrencies (KAS, DOGE, ETC, LTC, BTC) that can be withdrawn to any wallet.

2. Core Assets

- Solar Panels → permanent global power multiplier
- Gold Miners → produce Gold Coins
- KAS / DOGE / ETC / LTC / BTC Miners → produce real withdrawable tokens 24/7

3. Gold Coin Utility (Two-Phase Design)

Phase I (Current)

Gold Coins are used to cover real-token withdrawal fees.

All withdrawal fees are paid in Gold Coins → effectively reducing on-chain costs for players.

Phase II (Upcoming)

A meme coin will be fair-launched by the project in the future.

At that time, Gold Coins will become the exclusive currency to exchange for the upcoming meme coin (fixed or dynamic ratio, details TBA).

Gold Miners will transition from “fee reducers” to “meme-coin pre-mine tickets”.

1. Economy & Treasury

- 100% of USDT from miner purchases goes to the project treasury
- Treasury allocation (fully transparent when published):
 - 60% → player withdrawals (real tokens)
 - 20% → development & operations
 - 15% → marketing & community incentives
 - 5% → liquidity reserve for future meme-coin launch
- No pre-mine, no VC, no team allocation for the future meme coin

2. Referral System

Every successful referral permanently grants both parties 1 Solar Panel (client-side + ref parameter, fully decentralized).

3. Roadmap

- Q4 2025 → Web launch + referral system (live)
- Q1 2026 → Mobile optimization + daily rewards
- Q2 2026 → Leaderboard + visual upgrades
- Q3/Q4 2026 → Meme-coin fair launch + Gold Coin → meme-coin conversion

4. Risk Disclosure

Output depends on real token prices. Future meme coin has no guaranteed value. Play responsibly.
